PROFESSIONAL SUMMARY

Recent Bachelor of Science in Computer Science graduate specializing in data analysis and business intelligence, with hands-on experience in SQL, Python/Pandas, and Tableau gained through applied analytics projects, undergraduate research, and an ICT internship. Skilled in data cleaning, exploratory data analysis, dashboard design, and database validation, translating raw datasets into segment-level insights on customer behavior, churn, and performance trends. Complements analytical work with software development, computer vision, and software testing experience, and Git-based version control. Academic record includes Dean's Lister recognition and a hackathon championship.

TECHNICAL SKILLS

- **Data Analysis:** SQL, MySQL, Python (Pandas), Excel, Tableau, data cleaning, exploratory data analysis, database validation
- **Programming:** Python, Java, PHP, JavaScript
- **Databases:** SQL, MySQL, phpMyAdmin, XAMPP
- **Web Development:** HTML, CSS, Bootstrap, React, Laravel
- **Machine Learning & Computer Vision:** OpenCV, YOLOv8, FastText, OPUS-MT, T5
- **Tools & Development Practices:** Git, GitHub, Jupyter Notebook, software testing, debugging

PROFESSIONAL EXPERIENCE

City Government of Calamba — ICT Division

IT/Software Development Intern

- Queried, organized, and validated system data in SQL databases, ensuring data accuracy and consistency to support reliable system records.
- Developed and maintained a CCTV-based vehicle-counting system using Python, OpenCV, YOLOv8, and RTSP/CCTV streams, supporting a live government traffic-monitoring initiative.
- Performed software testing, debugging, and system validation to improve application reliability and performance.
- Collaborated with developers and ICT personnel to troubleshoot technical issues, deploy software enhancements, and produce technical documentation for internal knowledge transfer.

SELECTED PROJECTS

Telco Customer Churn Analysis

SQL, Python, Pandas, Tableau

- Cleaned and analyzed 7,032 customer records using SQL and Python/Pandas for data validation, transformation, and exploratory analysis.
- Engineered churn-related features and analyzed customer behavior by contract type, tenure, internet service, payment method, and service usage.
- Built an interactive Tableau dashboard with KPI cards, filters, charts, and heatmaps to communicate findings.
- Identified an overall churn rate of 26.58%, including 42.71% for month-to-month contracts versus 2.85% for two-year contracts, and 60.37% for a high-risk customer segment versus 18.86% for the standard segment.
- Flagged month-to-month, fiber-optic, and electronic-check customers as priority retention targets based on their consistently higher churn rates across segments.

Superstore Sales and Profitability Analysis — In Progress

SQL, Python, Pandas, Tableau

- Developing an end-to-end retail analytics project; cleaning and profiling a dataset of approximately 10,000 records using SQL and Python/Pandas.
- Analyzing sales trends, product categories, customer segments, regions, shipping methods, discounts, and profitability.

- Preparing an interactive Tableau dashboard with KPI cards, filters, and performance visualizations.

Taglish-to-English Translation System — Undergraduate Thesis

Python, NLP

- Developed a hybrid Taglish-to-English translation pipeline using a dataset of 16,145 Taglish sentences collected from Philippine Reddit.
- Applied Naive Bayes language identification, Tagalog stemming, FastText embeddings, OPUS-MT, and T5 for translation modeling and evaluation.
- Achieved a BLEU score of 46.08%, chrF++ of 77.93, and COMET of 86.15; thesis accepted and selected for colloquium presentation.

Evaluation Management System

PHP, MySQL, JavaScript

- Developed front-end components for a web-based evaluation platform used by employees and faculty across multiple user roles.
- Conducted functional testing and input validation, improving data accuracy and system reliability.

WTG (Where To Go?) — Event Finder Website

Laravel, JavaScript, API

- Built a responsive event-discovery platform enabling users to browse and explore local events via API integration, collaborating with a team through planning, development, and testing.

AX Fitness Website

PHP, MySQL, JavaScript

- Designed and developed a responsive fitness management website handling memberships, schedules, and service offerings, integrating front-end UI with backend database operations.

EDUCATION

Bachelor of Science in Computer Science

Graduated 2026

National University – Laguna

- Academic Achievements: Dean's Lister (2nd–3rd year); Iskolar ng Laguna Scholarship recipient

CERTIFICATIONS

- Data Analytics Essentials — Cisco Networking Academy
- Introduction to Cybersecurity — Cisco Networking Academy
- Python (Object-Oriented Programming) — Coursera

AWARDS, LEADERSHIP, AND PROFESSIONAL DEVELOPMENT

- **Binance Ideathon — Champion (2023):** Led a team designing a cryptocurrency-integrated academic system concept, earning first-place recognition for leadership, innovation, and execution.
- **Diversified Robotic Bootcamp — Final 15 (2024):** Selected for hands-on workflow automation training using Power Automate; developed automated processes for technical tasks.
- **Microsoft Power BI Bootcamp — Participant:** Completed hands-on training and exposure to data visualization, dashboard creation, and business analytics.

CURRENTLY LEARNING

- **AWS** — Data and cloud fundamentals (in progress)
- **Microsoft Azure** — Data and cloud fundamentals (in progress)
- **Databricks** — Data engineering and analytics fundamentals (in progress)
- **R** — Data analysis and statistical programming (in progress)
